## Feature Selection on Midi features

Methods to employ -

- 1) Tree based feature selection(Random Forests)
- 2) Recursive feature elimination with cross validation using SVM estimators

- 3) Anova F-measures
- 4) Chi-squared
- 5) Principal component analysis

We will apply each of them individually, evaluate performance, and choose a combination

Principal component analysis should be performed as the dimensions of the feature vector(1495) is more than the number of samples(196)

**study showed svm classification based on midi features had a test accuracy of 35%**
